

How to check why bookings are not found on Dashboard

[1. Opera - AIL events configuration](#)

[2. Opera - Unprocessed AIL events queue](#)

[3. CDH](#)

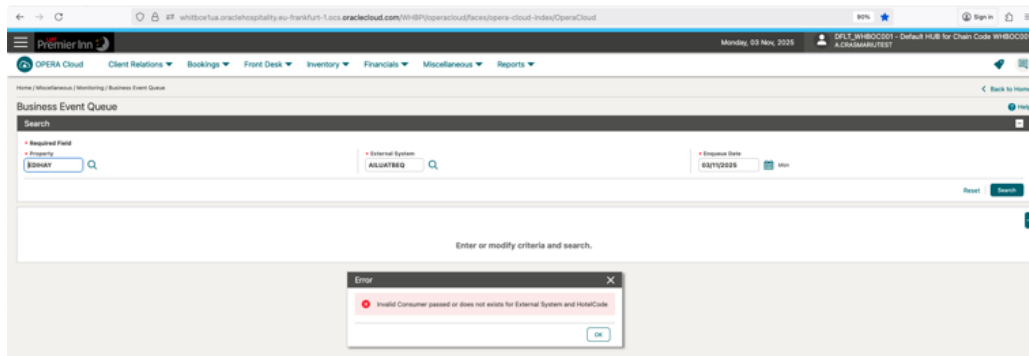

Bookings created from PI - as logged in user, BB and CCUI are retrieved from CDH.

In case something interfere in the create booking process and for some reason the bookings are not created in linked CDH environment, then the users will not be able retrieve the booking in PI (logged in)/ BB / CCUI nor to amend or cancel them.

There are several checks that we perform in order to identify what might be the cause of not having bookings retrieved in Dashboard:

1. Opera - AIL events configuration

- Navigate to Opera → Miscellaneous → Monitoring → Business Event Queue
- Search for specific hotel code and External system: AILUATBEQ
- If there is any error received on search it means something is not properly configured for the AIL events. Usually, this happens for newly configured hotels and needs to be fixed by Opera team.

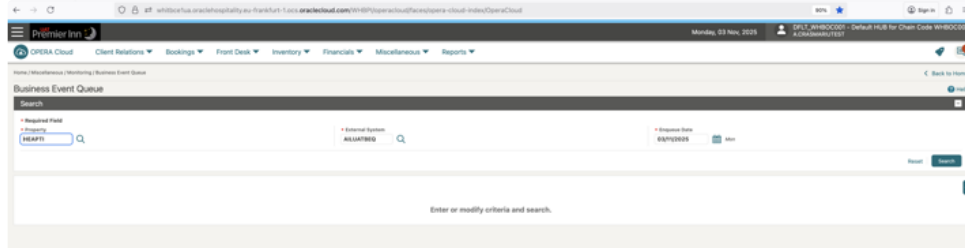

2. Opera - Unprocessed AIL events queue

In case there is no error received on step #1, check in Opera if there are any unprocessed AIL events:

- Navigate to Opera → Miscellaneous → Monitoring → Business Event Queue

- Search for specific hotel code and External system: AILUATBEQ
- Check search results:
 - no search results retrieved → there is no AIL events queue waiting to be processed - OK

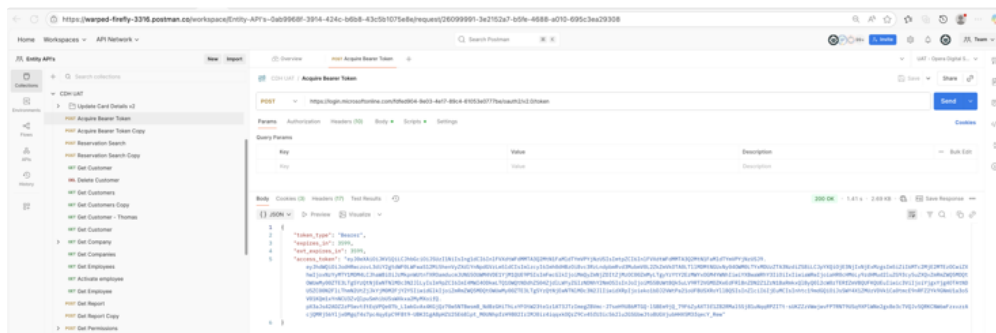

- there are several search results retrieved and those keep growing once additional bookings are created on that specific hotel → issue needs to be investigated by Opera/ AIL team

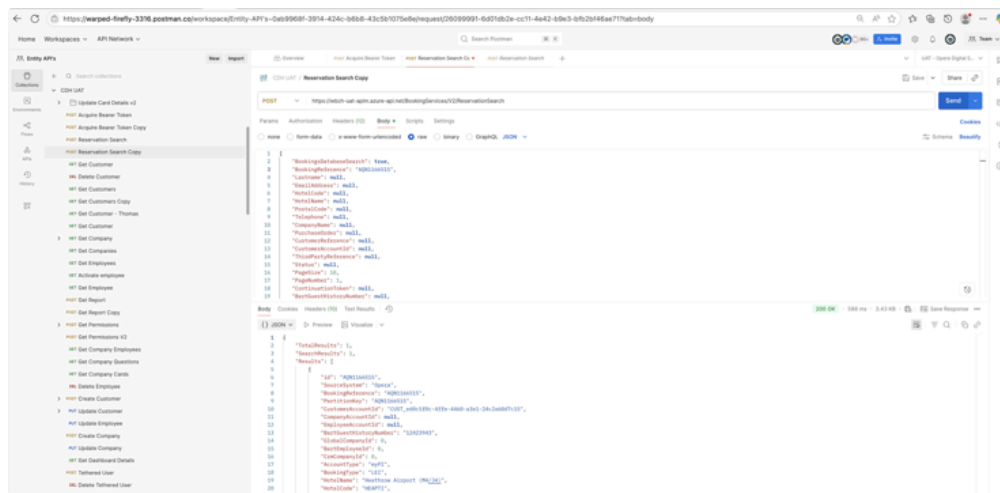

3. CDH

If AIL events are OK and still the booking details not retrieved in Dashboard, check if reservation is found on corresponding CDH environment. This can be achieved through CDH Postman collection, as per below:

- CDH Postman collection: <https://warped-firefly-3316.postman.co/workspace/Entity-API's~0ab9968f-3914-424c-b6b8-43c5b1075e8e/collection/26099991-ac0b34f0-e714-46f1-9f0b-b539a6bd0ee7>
- Acquire Bearer Token: <https://warped-firefly-3316.postman.co/workspace/Entity-API's~0ab9968f-3914-424c-b6b8-43c5b1075e8e/request/26099991-3e2152a7-b5fe-4688-a010-695c3ea29308>

- search for reservation: <https://warped-firefly-3316.postman.co/workspace/Entity-API's~0ab9968f-3914-424c-b6b8-43c5b1075e8e/request/26099991-6d01db2e-cc11-4e42-b9e3-bfb2bf46ae71?tab=body>

In case the reservation is not found in CDH but the AIL events are processed check if DIT/ UAT environment is not connected to the proper CDH environment → developers to check

For example UAT environment is connected to CDH. When creating a reservation if that reservation gets created only in CDH2 then we will not be able to see it in FE apps.
