

SOP0000065 - SRP-HDP Price Comparison Discrepancy

Overview

This SOP outlines the steps to investigate and resolve pricing discrepancies between the **Search Results Page (SRP)** and **Hotel Details Page (HDP)** for **UK hotels**. A daily alert email is triggered at **8 AM/ 11AM UK time**, listing hotels with pricing mismatches. While discrepancies for **DE (Germany) hotels** are expected due to City tax inclusion in HDP and can be ignored, **UK hotels** require a detailed validation process using website checks and backend API endpoints.

Objective

To ensure price consistency across SRP and HDP for UK hotels by validating data through multiple sources and identifying any backend or sync issues.

Process to be followed by BAU Digital Team:

The following process needs to follow when receive alert for Price Discrepancy:

Step 1: Review the Alert Report

- Check the alert email at 8:00/ 11:00 AM UK time and notice if any UK hotels are part of the report.

Step 2: Validate Prices on Premier Inn Website

For each UK hotel:

1. Visit Premier Inn Website and try to navigate to SRP for the particular hotel location with the reported Arrival and Departure date. And then move forward to HDP for reported hotel.
2. Compare SRP Price and HDP Price.
3. Note whether prices are **same or different**.

Step 3: PI SRP Prices are rendered via Av Cache Endpoint

Av Cache Endpoint (<https://restapi.premierinn.com/search/hotels/availabilities/v1?hotelCodes=HAMKLT&arrival=2025-10-28&departure=2025-10-29&channel=PI&adults=2&children=0&cot=false&roomQty=1&language=en&country=gb&roomTypes=DB,DBLWIN,WINCMB,NWDCMB,WINSPL,NWDSPL,ZPLDBL,FMTHRE,FMTRPL,FMTRSC,FMFOUR,DBLDBL,FMQUAD,FMBUNK,PPLDBL,PDBZPL,PFAMIL,BIGWIN,BIGZPL,VDOUBL,VZPDBL,VFMTHR,VFMTRP,VFMFOR,VDBDBL,VFMQUD,VPPDBL,VPDBZP,VPFMIL,DBLNWD,SINGL>)

[E,TWINRM,ACCSGL,LOWDBL,LOWTWN,BIGNWD,WETDBL,WETTWN,BRFDBL,BRFTWN,BRFZPL,ACCWIN,ACCNWD,PPDLOW,PPDWET,VSINGL,VTWNRM,VBRFDB,VBRFTW,VBRFZB,DOUBLE&rooms=1&flagMlos=true](#)) to validate backend pricing.

1. Use the reported parameters (hotelCode, ArrivalDate, DepartureDate) accordingly and compare the prices again the rate plan corresponding to the particular roomType.

Step 4: PI HDP Price is rendered via OperaRate Info Endpoint

OperaRate Info End point (<https://whitbce1.whb.hospitality-api.eu-frankfurt-1.ocs.oraclecloud.com/rsv/v1/hotels/GATASE/reservations/rateInfo?criteriaStartDate=2025-09-03&criteriaEndDate=2025-09-04&adults=1&children=0&ratePlanCode=STANDARD&roomType=DOUBLE&summaryInfo=true>)

1. Use the reported parameters (hotelCode, ArrivalDate, DepartureDate, ratePlanCode) accordingly and compare with SRP prices.

Step 5: Make sense check on Business Events for the affected hotel

If discrepancy still exists:

1. Check the **latest timeStamp when the hotel received business events**.
2. This helps identify if the data is outdated or not refreshed.

Step 6: On Demand Refresh

1. If at all required, we can try to run on-demand refresh for the reported day and hotel accordingly, which will refreshes/sync-up the prices between OPERA and AV Cache DB

Note :

1. General shift folks picks up the 8AM alert and provide an update within 30mins.
2. Business hour shift folks picks up the 11AM alert and provide an update within 15mins.

In both the cases, please make sure to get **confirmation from Vinodha/Satish/Sourav** before running the Ondemand as we want to leave one hotel for investigating.
